Instant Spoken Translation of Your Phrases

Simply speak, type, write or use your smartphone's touchscreen to select the words or phrases you want to translate, and *Interpreter* shows you the translations plus speaks them out loud. It's that simple, instant spoken translation.

Easy to Use

Other systems require you to navigate through multiple menus and scroll through long lists to try to find the phrase you want. *Interpreter* makes it easy. *Interpreter's* dictionary and phrases are all part of the same interface. Plus, you can easily create your own Favorites Lists for quick recall of phrases that you frequently use. Want more? *Interpreter* remembers the most recent 20 phrases that you've translated, allowing easy reuse. Even more? Use the powerful *Find* features to locate phrases that you want to translate. It all adds up to a powerful, flexible, yet easy-to-use system.

Say What You Want to Say

With *Interpreter*, you will no longer be frustrated by being forced to only use a fixed set of phrases that are hard to locate and difficult to remember. Instead, *Interpreter's* PhraseBuilder™ technology lets you say exactly what you want to say. With a single click, *I want to buy ...* becomes *I want to buy four tickets* or *I want to buy a dozen roses*. You can also combine words from *Interpreter's* dictionary with your phrases, for example, entering an ingredient to the phrase, *I am allergic to ____*. Further, with *Interpreter* you can add your own new words, phrases and categories. You can also choose whether to use a male or female voice for the translation, or to use audio recorded by a native speaker or have *Interpreter* automatically generate the speech. The flexibility is designed into *Interpreter* so it adapts to how you want to communicate, instead of the other way around.

Accurate and Precise Translations

Other translation systems give you one translation for one phrase and you're left to guess as to the translated meaning. Does the word "right" mean "correct" or "direction" or one of many other all valid meanings? With *Interpreter* there is no guessing. *Interpreter* supports multiple translations per word and per phrase and provides usage examples so you can select the best translation to match your intended meaning.

Package Options

Interpreter includes words and phrases for general conversation (49 categories). Additional packages, such as emergency medical situations (24 categories) and military specific applications (17 categories), are available. Combine your system with *Composer*, and you now have the ability to easily share your customized vocabulary with others, ensuring all users benefit from the customized terms that you enter into your system.
